

Aurora Four

Surgical Light

Reliability • Versatility • Cost Savings

Putting the surgical team in control of focus & illumination.

After spending decades lighting the way for surgical teams around the world, Skytron has combined all of the features important to the operating room in the Aurora Four light. This next-generation surgical light puts enhanced clarity and focus in the clinician's hand – with only one twist of the center sterile handle.

Better, Brighter Light

Now featuring a larger spot size and intensity up to 160,000 lux, the Aurora Four surgical lights bring crisp, deep-cavity illumination to any procedure. With unique reflector technology, the lights dramatically minimize shadows that obscure visibility of the surgical site.

Effortless Operation

Featuring focus control from the center sterile handle, seeing precise detail no longer means repositioning the lighthead, adjusting the spot size or leaving the sterile field. The focal point adjusts according to the surgical team's preference – with only one twist of the handle.

More Options

Skytron puts the clinician in control with the option to choose between a warmer or cooler color temperature based on the procedure type. Integration with booms, flat-screen displays and HD cameras make the Aurora Four surgical light a versatile solution.

The Surgical Light with True Focus Adjustment

When precise detail must be visualized at a greater working distance, the clinician can easily fine-tune focus without pausing to adjust the position of the light. The focal point can be moved with a twist of the handle, extending the working distance without moving the lighthead or reducing surgeon head room. Aurora Four surgical lights put the surgical team in control while keeping the operating room hassle free.

Direct Focus Control

Greatest Intensity

Greatest Intensity

Working Distance

Adjust focus without moving the lighthead – one twist of the handle moves the focal point up or down

Thoughtfully designed for today's surgical teams

Skytron knows that operating room services are complex. That is why the newest generation of surgical lights is designed to take unnecessary work out of each procedure.

Hassle-free Features Include:

- Aurora Four lights can be placed further away from the patient, opening up the line-of-sight and minimizing physical contact with the fixture
- 110° vertical travel allows downward positioning for hip, OB-GYN and urology procedures
- 360° rotation on all axes and lightweight construction keep positioning simple
- Drift-free stability keeps lights exactly where needed
- Reliable performance and lower cost of ownership bring peace of mind

Combination of fixed and variable focus LEDs produce a stunningly brilliant light

Unique vertically segmented reflectors create a crisp, homogenous spot

Wall intensity control offers five adjustable settings and color temperature selection

Color temperature of 4100K illuminates deep tissue with soft, white light

Color temperature of 4500K illuminates orthopedic procedures with bright, white light

Optional Precision HD camera system

Brilliant and Crisp Illumination

- Center sterile handle adjusts intensity, focus and positioning
- Vertically segmented reflector design for shadow reduction
- Unique upward-facing LEDs are suspended in cradles and keep the surgical field cool and comfortable
- Large spot size fills cavity with seamless light
- 24" or 30" diameter lightheads
- Maximum intensity up to 160,000 lux
- Selectable color temperature of 4100K or 4500K
- CRI of 96
- 360° rotation on all axis
- Camera-ready options available

More Options for More Environments

Seamlessly integrate Aurora Four surgical lights with booms, flat-screen displays or independent camera arms. For specialty rooms or clinics, a mobile stand option is available.

Features Also use Aurora Four Lights in:

- General and Hybrid Operating Rooms
- C-Section Suite
- Cath Lab
- Emergency Department
- Intensive Care Unit
- Outpatient Surgery Centers
- And more

With numerous options and configurations, we have an Aurora Four surgical light that is right for any clinical environment. From hybrid to general operating rooms, contact your local representative to find the right solution.
